ALL THE BEST—Greenhouse Forcing "SNAPS"

Originator's Packets

Special Note—Seed should be sown late June or July for Winter flowering in Northern States. Late July or early August in Southern States. High temperatures retard germination. Select a cool location for the seed flats where there is good air circulation. Water sparingly but keep moist, until seedlings are well established. We recommend using sterilized soil and it should not be fertilized. Dust seeds with Proliferol or Hormo-Root before sowing.

FLECK'S DEPENDABLE BULBS

Fleck's Croft Lilies

Finest True Strain, Highest Bud Count

(WASHINGTON STATE GROWN)

Those who already know our brand of these fine Lilies, always reorder the following year. There must be a reason.

**A House of Fleck's Croft Lilies Just Before Easter, 1950.
Note high bud count.**

The following is typical of many letters we receive:

From North Jersey

Bulbs were fine. Had 1000 blooms on the 250 bulbs.

I potted them December 20, and they came in just right. 24 inches high from top of pot.

I want a case of 250 for 1951.

From Rhode Island

Last years' 7/8's were beautiful. We realized 100% perfect blooms. Hit Easter right in time. Send 2 cases this year.

Order now for Easter 1952 forcing. Also for shipments from cold storage—December through April for continuous cuts next Spring and Summer.

STARTED IN VITA-BANDS

NOT STARTED IN VITA-BANDS

Here's convincing, authentic proof that snaps started in Vita-Bands get an all important head start. Nutrient treatment, rootball protection given by Vita-Bands aids vigorous growth to continue without halt right through transplant period.

Amazing pictures prove snaps started in BIRD VITA-BANDS get important head start to market

Higher Profits earned by Premium Blooms

The photographs above show the actual history of a crop of snaps. Both crops were grown in the same soil, the same house, and under the same conditions.

The snaps at right (*not in Vita-Bands*) were seeded June 12th, benched July 26th, and the picture was taken October 15th.

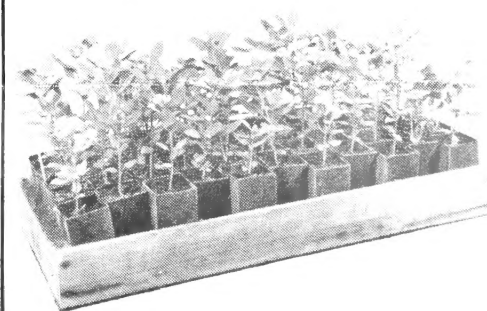

Twelve days later (June 24th) the snaps at left were seeded. They were transplanted to Vita-Bands, and then benched on August 10th. The photograph was also taken on October 15th!

But . . . look at the difference! The snaps started in Vita-Bands are healthier, sturdier, far ahead of the others . . . and the premium blooms they produced commanded top prices!

We'll be glad to show you other histories . . . to illustrate how you can profit by using Bird Vita-Bands. Just send us a line, using the address below.

Order from supplier's catalog, or write us direct . . . Bird & Son, inc., Dept. FR-4, East Walpole, Mass.

Flat of young snaps shows set-up of Vita-Bands, typical sturdy growth. Vita-Bands require minimum of labor, produce higher net profit from premium blooms in the early market.

VITA-BAND 10 for short growing periods. Will usually contain root growth up to approximately 8 to 10 weeks. Nutrient-treated with quickly available plant food . . . your judgment determines need for additional feeding. Especially good for annuals and vegetables.
